- Bundesautobahn

The 21st century – the "century of the city"?

Over the last 50 years, the world has witnessed an unprecedented growth of its urban population.

The urban population reached

- one billion in 1960,
- two billion in 1985 and
- three billion in 2002.

Today, more than 50 % of approx. 6,5 billion people are living in urban areas.

According to an estimation of the UN Center for Human Settlement, in 2025 approx. 2/3 of the world's population will be urban dwellers.

Decline and crisis stories prevailed in the discourses on cities in Germany

For some decades, German cities had to face a cumulation of problems difficult to deal with:

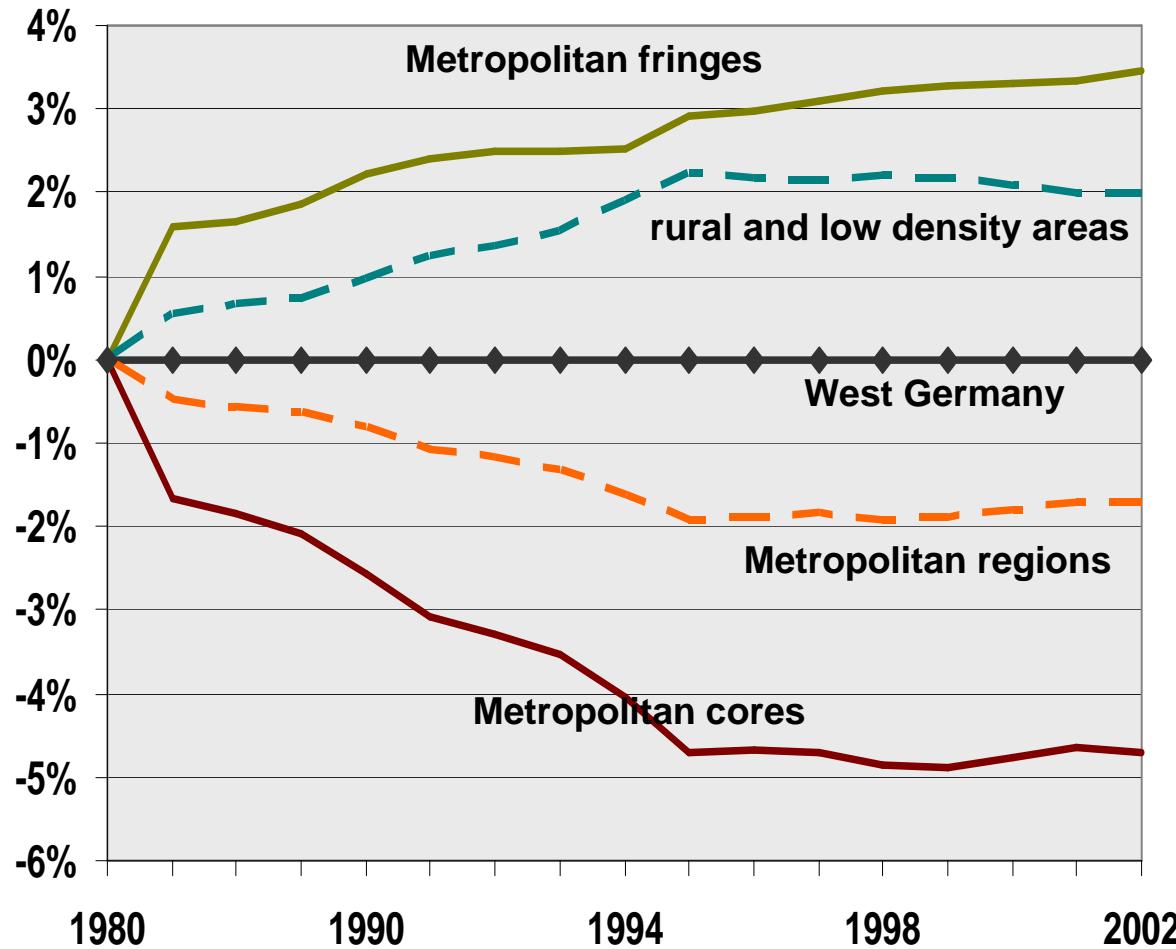

- **outward migration of urban dwellers and job opportunities**
- **persistent mass unemployment**
- **erosion of their financial basis**

and after the German unification especially East German cities were faced with

- **dramatic forms of urban shrinkage
(rétrécissement urbain)**

"Medium-term" Settlement Structure Development (employed population)

→ Trend of **Suburbanization** as well as
→ Trend of **Disurbanization**

**Development
of employment
per area type
from 1980 to 2002**

Suburbia, Urban Outskirts or the "Urban Sprawl" –

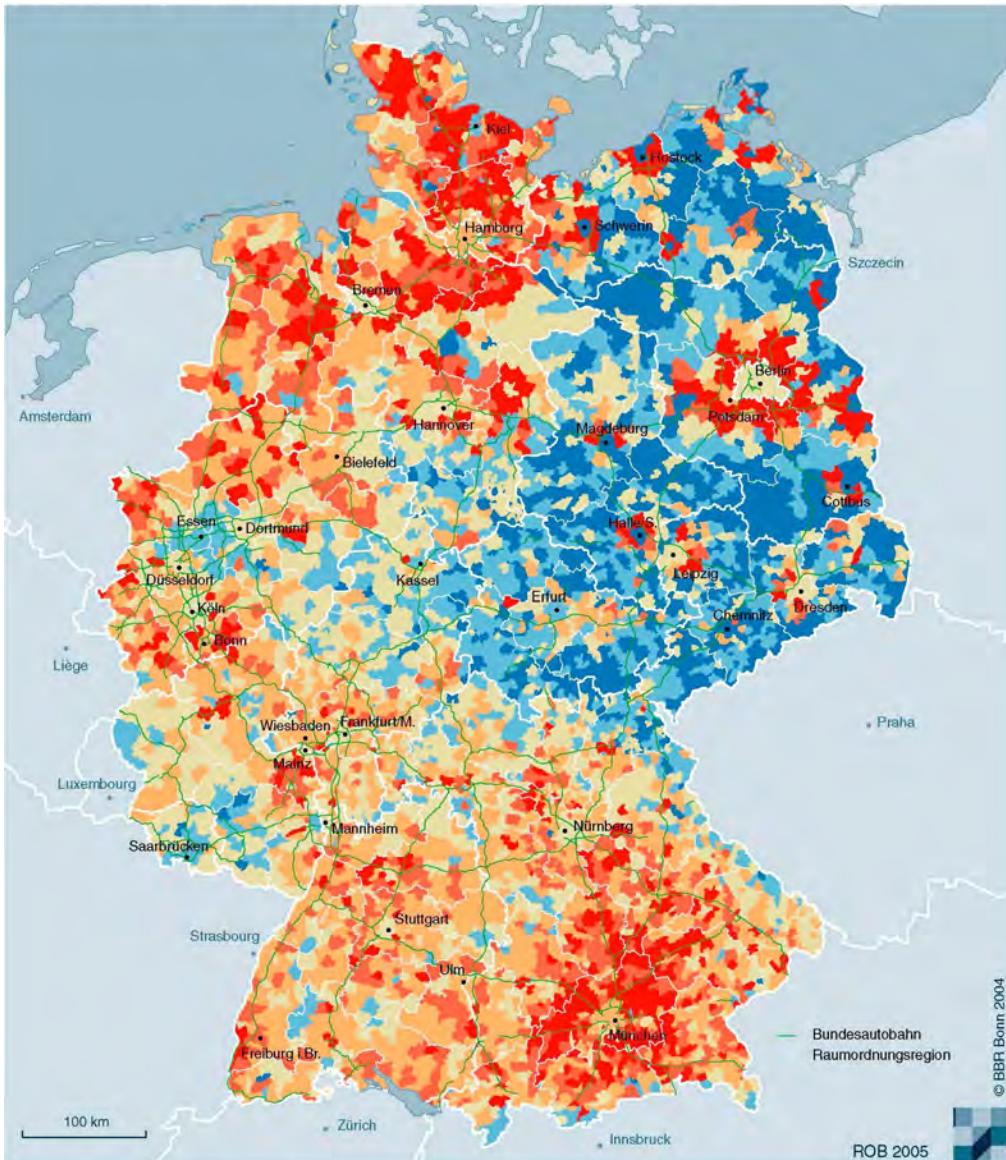

As a result of the wish
of the vast majority, for
an affordable dwelling
in a green area

People are slipping away
from the constraints of the
proximity of urban living.

Unemployment rates in German Cities 1980 - 2007

Current population development 1997 - 2003

Quelle: BBR (2005): Raumordnungsbericht 2005.

Side by side growing and shrinking population:

In approx. **3000 municipalities** the population rate **grew** by 3,2 % over the last 6 years, whilst simultaneously **falling** by 3 % in approx. **1760 municipalities**.

Growing and shrinking municipalities are often located closely to one another.

Labour – the decisive production factor in a knowledge economy

→ "Skills matter"

With the transition to a knowledge economy intellectual labour and creativity are becoming the key localization factor.

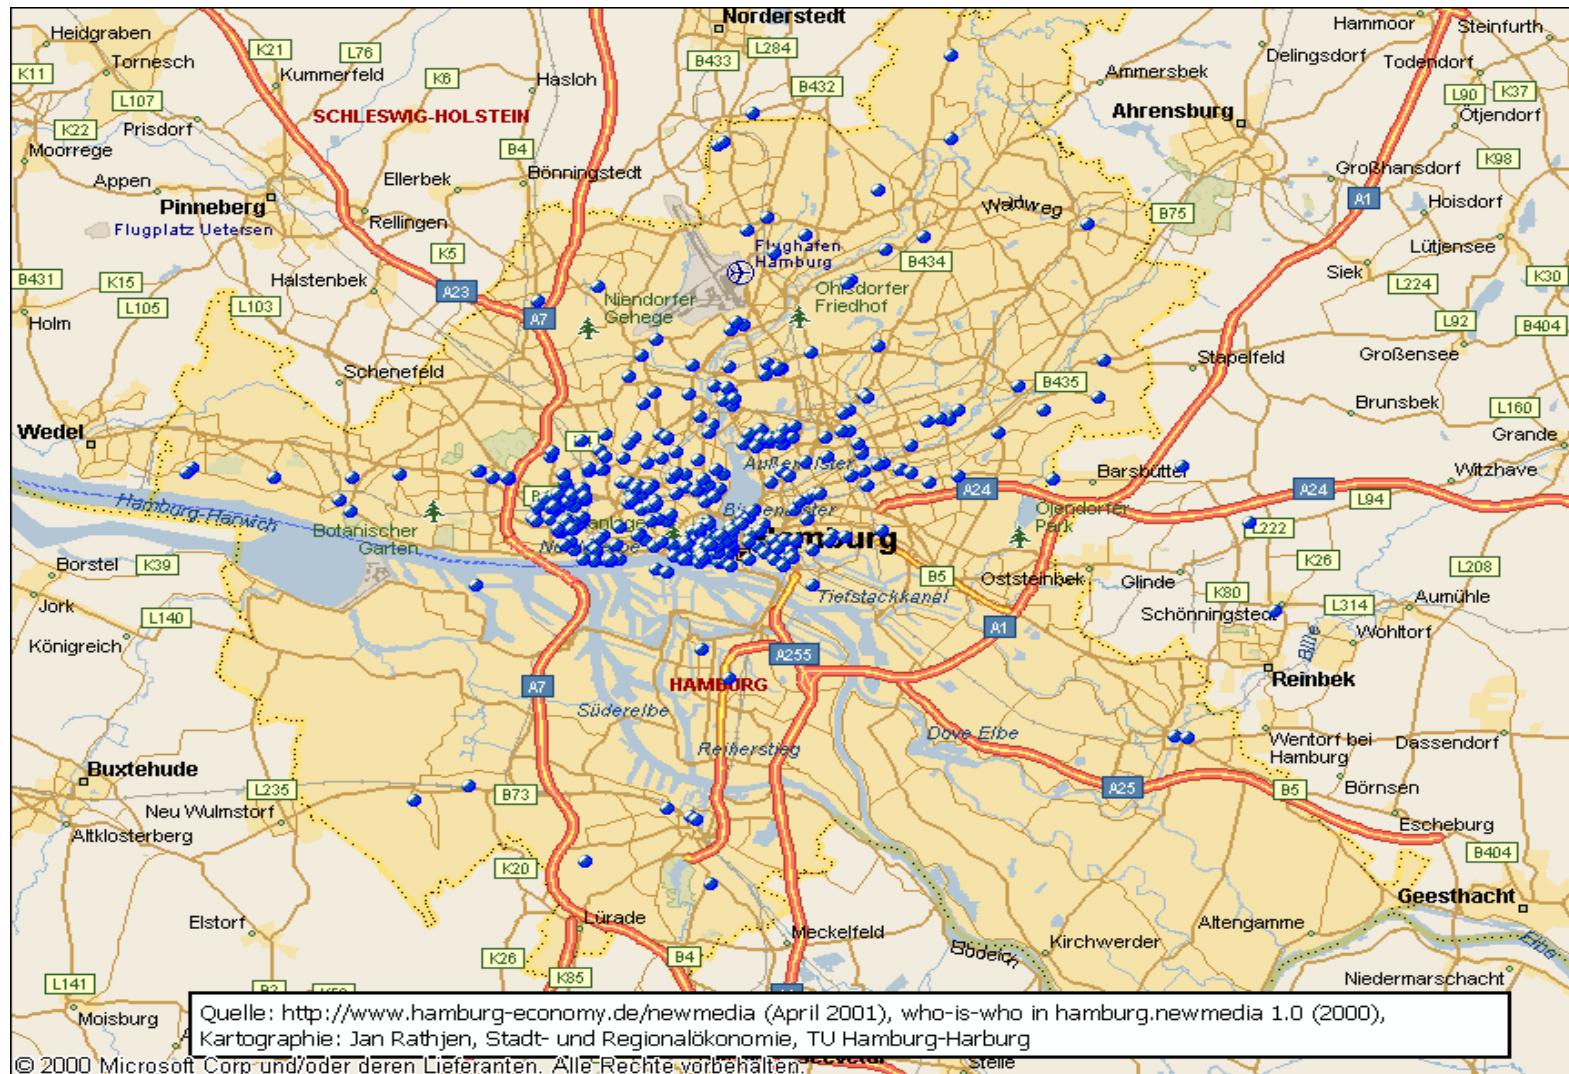

Urban labour markets increasingly function as "**urban magnets**":

Firms look at the availability of qualified labour force
in their choice of location
and

qualified labour force will look for places with
a high variety of employment possibilities and urban living conditions.

This will activate in metropolitan regions a **cumulating dynamic between labour demand and labour offer**.

The urban location pattern of the multi media and internet related service firms in the inner-city sites of Hamburg

Consumption, entertainment, amenities

Spatial distribution of metropolitan functions – Network of metropolitan regions in place of a Global City

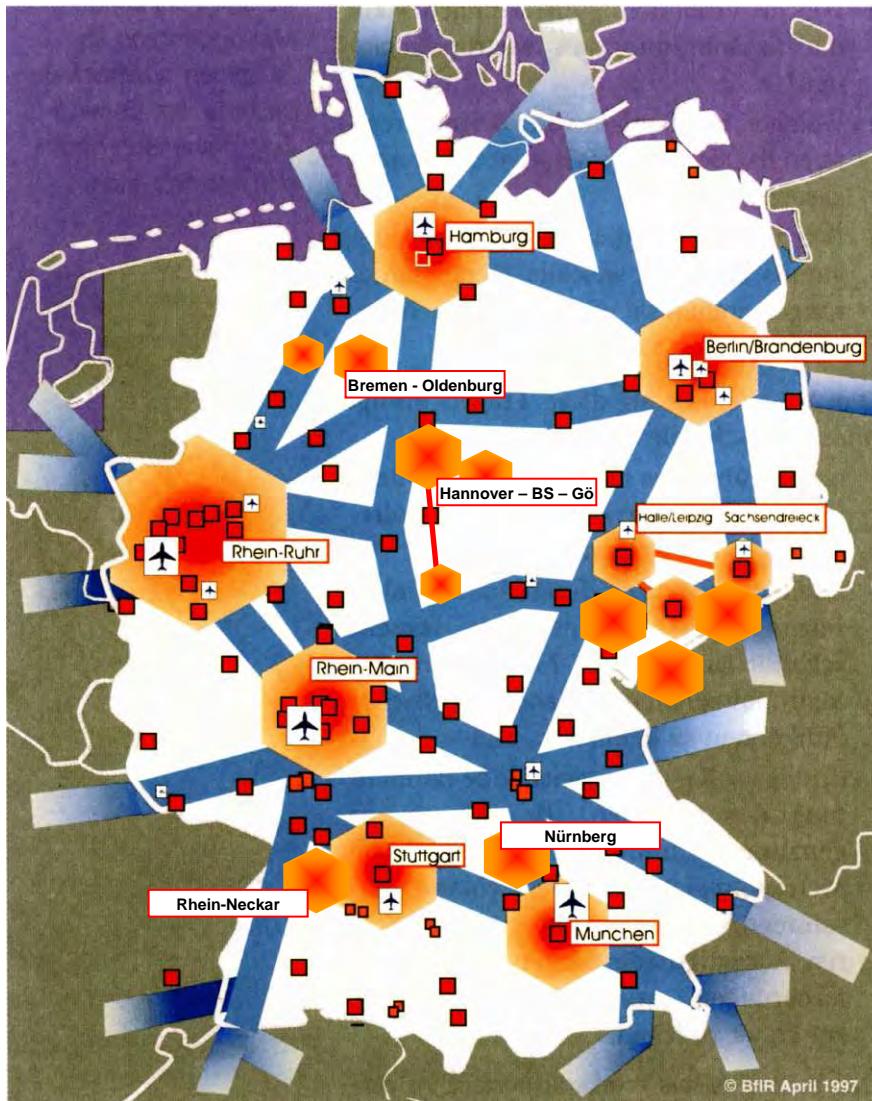

Quelle: BBR (2005) Raumordnungsbericht 2005. Berichte Bd. 21, Bonn, Seite 185

In Germany the polycentric urban system forms the historical basis for the development and profiling of metropolitan functions.

The metropolitan functions of diverse metropolises are interlinked in a spatial nexus.

Network of German Metropolitan Regions

**Polycentric distribution
of metropolitan
functions:**

- Decision and control,
- Innovation and competition ,
- Gateway

„European Metropolitan Regions“ – following a resolution of the conference of the German ministers for spatial planning – in a first step: **Berlin/ Brandenburg, Hamburg, Munich, Rhine-Main, Rhine-Ruhr and Stuttgart**, as well as the potential metropolitan region, the so called **Sachsen Dreieck: Halle/ Leipzig, Dresden and Chemnitz**; this list was complemented by **Hannover-Braunschweig-Göttingen, Bremen-Oldenburg, Rhine-Neckar & Nuremberg**.

„Export World champion“ Germany without a „global city“?

Question:

How can we explain the contradiction between

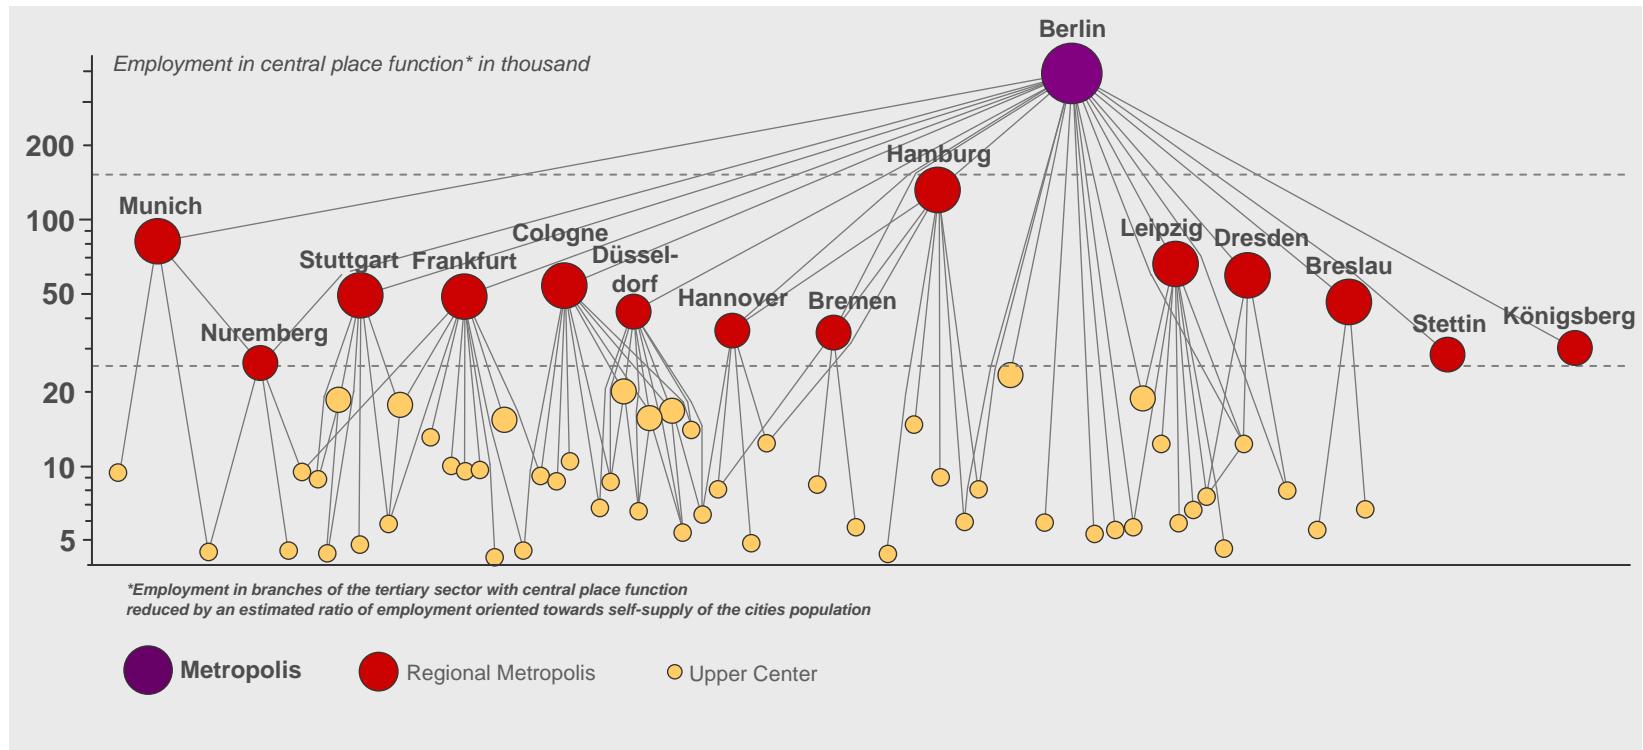

- > the **key position of Germany in the global economy** and
- > the **,secondary importance‘ of the German cities in the global networks of cities?**

Is the German network of metropolises only a special deficient case in the hierarchy of the global network of cities

or

is it likely that the „Rheinish Capitalism“ has not only formed an alternative model of production, but also an alternative and effective model of urbanization?
